Anaphylaxis is a life-threatening allergic reaction that can be fatal within minutes. It should be taken seriously. Quick action is necessary!

**Anaphylaxis is a severe allergic reaction to:**
- Food
- Stinging insects
- Medications
- Latex
- Exercise
- Unknown causes

**Symptoms of anaphylaxis may include:**
- Generalized itching with or without hives
- Swelling of the throat, lips, tongue and eye area
- Difficulty breathing and/or swallowing
- Metallic taste or itching in mouth
- Abdominal cramps, nausea, vomiting, diarrhea
- Increased heart rate
- Weakness, collapse, paleness
- Lightheadedness, loss of consciousness

If you think you are having an allergy emergency or anaphylaxis, follow the emergency plan you and your health care professional have developed.

*(Turn card over)*
Your emergency plan may include:

• Using one of your EpiPen® auto-injectors
• Also taking an antihistamine, if prescribed by your physician
• Calling 911 or having someone take you to the emergency room

If you have an anaphylactic episode, you must seek further medical care immediately. The effects of an EpiPen® only last 15-20 minutes.

Write your physician's and emergency contact person's phone number in the box below and keep this card in your purse, briefcase or backpack. You may need this information at the emergency room.

My physician is:
Name____________________________________________________  Phone Numbers___________________________

My emergency contact person is:
Name____________________________________________________  Phone Numbers___________________________
